

Hexes

Customising hexes animation is fairly easy. The source code is located in /assets/js – there are 3 hexes-*.js files that you can modify. Note, it's a good idea to back up the original file before playing with it. You can play with the most of the variables on the top of the script, particularly the colors array and some of the constants.

Triangles

The same goes for the triangles. You will find the configuration values at the top of each script – so feel free to experiment and create something truly unique.

Slider

To use the slider, simply use the structure required for its activation:

```
<div class="slider">
  <ul class="slides">
    <li>
      
      <a class="explore-case btn btn-large btn-flat waves-effect waves-
dark white-text" type="submit">Explore case study</a>
    </li>
    <li>
      
      <a class="explore-case btn btn-large btn-flat waves-effect waves-
dark white-text" type="submit">Explore case study</a>
    </li>
    <li>
      
      <a class="explore-case btn btn-large btn-flat waves-effect waves-
dark white-text" type="submit">Explore case study</a>
    </li>
  </ul>
</div>
```

Video

If you wish to have a video background, use the following snippet to add your own video:

```
<div class="hero">
  <div class="video-container">
    <iframe src="https://player.vimeo.com/video/105027353?
color=c4d127&title=0&byline=0&portrait=0&t=0m5s&autoplay=tr
ue&background=1" frameborder="0" webkitallowfullscreen=""
mozallowfullscreen="" allowfullscreen=""></iframe>
    <h1 class="bold">Creating impacts</h1>
  </div>
</div>
```

Note: the background=1 parameter is removing sound and all the controls, so the video works best as a background.
